

Dear Reader:

Vistra Corp. is committed to supply chain sustainability to reduce the environmental impact of operations while continuing to provide reliable, affordable, and sustainable energy for years to come. We believe partnering with our suppliers, internal stakeholders, and industry peers will empower us to positively impact the communities we serve and be better stewards of the environment.

We have set a goal to reduce our greenhouse gas emissions by 60% by 2030 (compared to a 2010 baseline) and plan to achieve this in part by transitioning to cleaner energy sources including nuclear, solar, and battery storage.

In addition to transitioning to cleaner energy sources, Vistra is also working to reduce waste and promote recycling throughout our supply chain. The company has implemented several waste reduction initiatives including recycling programs and composting facilities, and we are constantly looking for ways to reduce our waste footprint even further.

We are committed to promoting sustainability throughout our supply chain by working with suppliers to ensure they are also operating in an environmentally responsible manner. We have revised our Supplier Code of Conduct to outline our expectations for suppliers in terms of environmental sustainability.

Vistra's supply chain sustainability efforts are an important part of our commitment to reducing our environmental impact and promoting a more sustainable energy future. By investing in renewable energy, reducing waste, and promoting sustainability throughout its supply chain, Vistra is helping create a more sustainable energy system for all.

Sincerely,

A handwritten signature in black ink that reads "Phil Seidler".

Phil Seidler  
Sr. Vice President — Supply Chain  
Vistra Corp.
